Theme Note

"Consciousness" is one of the most interesting terms ever discussed in the field of philosophy and psychology. As it is interesting so is it equally elusive. Centuries of studies in this direction still does not seem to give any definition to consciousness. In common parlance, consciousness is understood as being conscious or being aware of one's surroundings or what is within oneself. From its Latin origin the term conscious means “to know”. There are a few pertinent questions that may be asked with regard to the study of consciousness both in philosophical and psychological studies. “To know” what? Who is the knower? Who or what is known? What is the process of knowing? These questions are relevant for they have been bothering humanity since time immemorial. The quest for knowing the reasons of one’s birth and the process of creation have occupied the minds of the greatest of our rishis since ages. These quests and the process of finding answers to them have taken the form of the Vedas, the Upanishads, shad-darshana, Bhagavad Gita and in contemporary times The Life Divine and other recent noteworthy studies in different fields of science and arts.

The ancient wisdom concludes that consciousness is not only awareness of the mind. It exists in all things animate and inanimate for it is the cause of all. The modern definitions of consciousness are slowly heading towards discovering the inherent nature of consciousness by defining this power as energy or vibration. Whether natural or human sciences all are compelled, as if, to conclude that consciousness exists in everything and is present everywhere. Therefore, studies in consciousness have been extended to medicine, education, management, sociology, anthropology and other disciplines. Consciousness has come out of the restriction of philosophy and psychology and made its place in various fields of knowledge.

It is to view this need of the growing study of consciousness that this seven-day workshop is being organized. It will bring in the perspectives of consciousness from the disciplines of Philosophy, Psychology, Literature etc. Its aim is to bring clarity about the Vedantic concept of consciousness and its applicability to the world today as given to us in The Life Divine by Sri Aurobindo.

Note for participants:

1. No remuneration would be given to the participants.
2. All travel bills to be submitted to SACAR Coordinator for reimbursement which will be given on the last day of the workshop.

About SACAR:
Sri Aurobindo Centre for Advanced Research (SACAR) started in Pondicherry in 1998, is a non-governmental, educational research Institute. It has for its objective an in-depth study of and research into the thought and vision of Sri Aurobindo and the Mother and relate it to the present and the future of India in particular and the world in general. The guiding principle of all our activities is the synthesizing movement to unite in a practical and progressive way the highest spiritual realisations with the development and perfection of the outer life — two fields that have been historically the special domain of Eastern and Western nations, respectively.

Activities at SACAR:
- Online courses on Sri Aurobindo’s major works
- “Living Within” Study camps
- Intensive and Extensive Research for one/three months in Sri Aurobindo’s major works
- M.A, PhD. Courses in Collaboration with Hindu University of America, Florida.
- Workshops and Seminars in Integral Management
- Publications: Books and Journal
- Research in Management Studies
- Teacher Training Programme
- Research Project: Mankind on the March
